Future Security System

www.triagonal.dk

A new and innovative way of conducting the security process in airports is currently being developed by Exruptive and consists among other steps of an intelligent trolley with a tablet attached. Triagonal is currently working on the overall information strategy and the design of signage and user interface on the tablet, when testing a simulation of the new security process with test passengers in Vojens airport.

Client	Exruptive A/S
Location	Vojens, Denmark
Project Period	2013 - ongoing
Team	Peter Donner Christian Karlsmose
