

VIA University Campus

Wayfinding systematics and Signage

www.triagonal.dk

For the new, combined Main Library and Citizens' Services in Aarhus, Triagonal has developed a dynamic wayfinding and information system to obtain flexibility in displaying information and wayfinding during the day. The project took into account the building's varied user groups, ranging from citizens requiring municipal services, students, regular library users, children of all ages, to concert goers in the evening.

Client VIA University Campus
Location Aarhus, Denmark
